

DATA ACTIVE ON-DEMAND-TRANSMISSION SYSTEM

ABSTRACT

5 The convention transmission method is an on-demand data communication,
in which one discloses a demand and one provides a supply. However, this
communication way is not suitable nowadays. Since amount of current data
transmission is very large. In order to improve the quality in service, the service
provider provides actively the required service to the customer. After browsing
by the customer, then the customer transfers the selection items to the service
provider and then the service provider provides required service to the
10 customers, By this way, the customer may browse products rapidly and the
quality of information service is improved.
